

City furnitures should take place around the building and interiors; as well as, they meet the essential needs of social areas such as, streets, parks, squares and schools. Our designs with modular structure which are compatible with the area characteristics can be reconfigured according to tendencies and needs of living people.

The elegance of Sek beton products comes from the near natural appearance because of the quality of materials. We offer our products with different colors and textures. Our high quality concrete are treated by impregnating with high-tech chemicals. The surface roughness, the properties of dirt repellent and easy to clean were improved. Wood components are 'Sapelli' which is a type of mahogany. Water-based transparent finish keeps the original texture of wood. Metal parts and screws of our products are stainless steel.

Our products adapt to each venue individually or as modules can be used in different mobility. They allow the concept works in the outdoors with the thoroughness of the interior.
